

A₂₀P Peel

A₂₀ Peel

Alpha-Arbutin
Kojic Acid
Tartaric Acid
Hydrogen Peroxide

A20P - MCCM is an innovative treatment developed by Mesosystem, which does not affect the superficial layer of the skin, and therefore does not require a long recovery period. Based on the intensity of exposure to the skin, it is considered a deeper peeling.

DESCRIPTION

Alfa Arbutin - is a powerful natural whitening with proven performance and being less likely to cause irreversible hypopigmentation. Arbutin is a natural 'cousin' of synthetic hydroquinone. It is a good alternative to the hydroquinone for the treatment of various types of pigmentation spots and hyperpigmentation.

INTRODUCTION The skin colour is determined by the interaction of different pigments.

Haemoglobin is responsible for the reddish and bluish tone, while the carotenoids are responsible for the yellowish skin colour. The resulting brown colour of the eumelanin and pheomelanin pigments, which are produced in cells of tyrosinase, usually present in an inactive form, are formed in these melanocytes. Its activation by UV light triggers the melanogenesis, for example, a complex series of chemical reactions of enzymes that eventually lead to the formation of melanin. The effective blocker of tyrosinase inhibits the chain reaction of melanogenesis.

FORMULA

A20P® IS AN IMPROVED FORMULA OF ARBUTIN Each molecule of A20P contains a unique combination of Alpha Arbutin 20% [C₁₂H₁₆O₇], hydrogen peroxide H₂O₂ that neutralizes the effects of the peeling (no need to neutralize), adding the benefits of Alpha Arbutin [C₁₂H₁₆O₇] and Tartaric Acid (C₄H₆O₆).

. **Kojic acid** - The main objective of this component is to whiten the skin. The chemical composition of this acid suppresses melanin production. Previously, it was used to eliminate pigmentation, freckles, remove post-acne remains and scars.

. **Tartaric acid** – The Tartaric Acid renews the skin.

Organically, extracted from the fruit pulp, such as grapes, pineapple, apple and blackberry, the tartaric acid is indicated for all skin type, from the oilier to more acne-prone.

'It has been widely used in aesthetics because it stimulates the blood circulation and the skin regeneration.'

FORMULA

Alfa Arbutin - is a powerful natural whitening with proven performance and being less likely to cause irreversible hypopigmentation. Arbutin is a natural 'cousin' of synthetic hydroquinone. It is a good alternative to the hydroquinone for the treatment of various types of pigmentation spots and hyperpigmentation, being a good antibacterial.

H2O2 reduces the aggressiveness of the acid effect, preventing the denaturing of the stratum corneum and the water release.

In low concentration levels, it has several other important effects in the dermis - enhances fibroblast activity, regulates the activity of lymphocytes and regulates the inflammation caused by acid.

Alfa Arbutin + Kojic Acid + Hydrogen Peroxide + Tartaric Acid

Treatment

Needed products

- 1 . MCCM Cleansing Milk 2&1 MCCM
- 2 . MCCM Facial Tonic
- 3 . Cleansing Solution
- 4 . **K33P Pelling Solution**
- 5 . WA Arbutin Cream
- 6 . Sun Cream SPF 50+

INDICATIONS - A20P USAGE

STRECH MARKS

-

HYPERPIGMENTATION

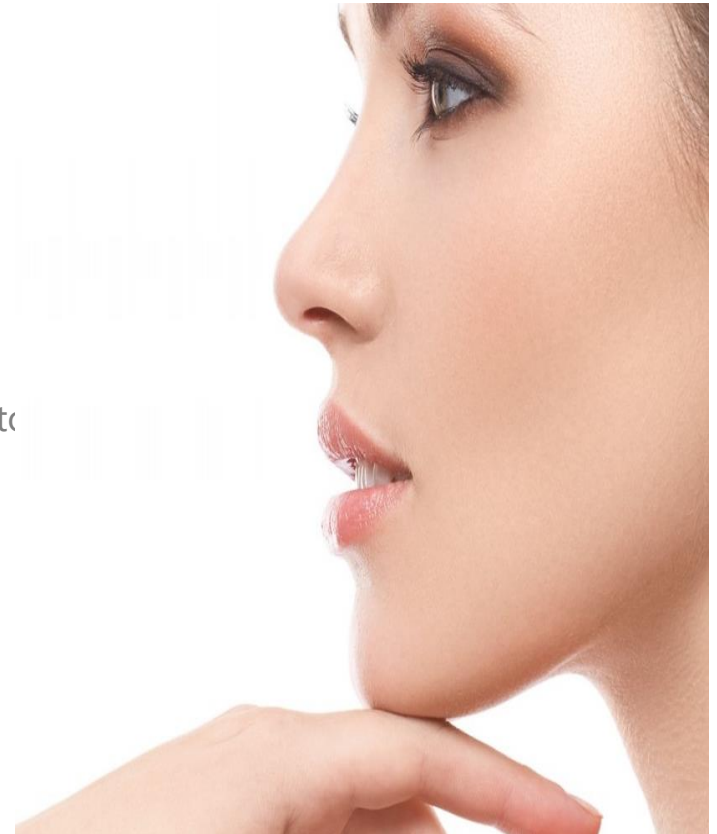

-

AGE SPOTS

A20P ADVANTAGES

- **PAINLESS PROCEDURE**
- **ABSENCE OF REHABILITATION PERIOD**
(There is no flaking or oedema)
- **NO AGE RESTRICTION**
 - For skin type
 - **It can be used the whole year.** It is not necessary to wait for the cold season or reduced solar activity.
- **Visible results from the first session onwards and for a long time**

THE SKIN IS NOT PHOTSENSITIVE AFTER THE TREATMENT.

A₂₀ Peel EFFECTS

It promotes skin whitening, providing a uniform tone, but specially it isn't photosensitive and can be used during the day without having to avoid sun exposure after application.

Scars and acne scars reduction.

It stimulates the collagen synthesis.

Improvement of the tone in scar skin.

One session

BEFORE

AFTER

Usage

Step-by-step

1st step: Cleanse with Cleansing milk MCCM

2nd step: tone with MCCM Facial Tonic

3rd step: Apply Cleansing Solution with a gauze

4th step: apply the A20P through zones making a lifting massage until absorption;

The same procedure should be followed in 3 or 4 applications per zone.

5th step: apply WA Arbutin Cream and Sun Cream SPF 50+

Homecare recommendations: WA Arbutin Cream and Sun Cream SPF 50+
