 **MADE IN GERMANY** 

NWT

PHILOSOPHY

Innovation and quality - our daily commitment

NWT GmbH was founded 17 years ago as an innovative manufacturer of mobile dental treatment units, podiatry and pedicure devices and nail design devices. Over the years we have used our experience to constantly renew and expand our product range. NWT GmbH has earned a high reputation among users and distributors in more than 65 countries as a leading and reliable partner.

All our products are developed and manufactured exclusively at our location in Germany according to the highest standards for medical devices. For more than 15 years, NWT GmbH has been certified DIN EN ISO 13485, which guarantees the quality and performance of all our products.

With NWT users have a strong partner at their side for their daily and long-term needs. Continuous product development and dedicated customer service teams ensures cutting-edge technology and reliable products through time at an excellent price-performance ratio. We pay great attention to the sustainability of our products and our customers' feedback. It is our aim to always exceed expectations. With the support of our users and partners, we are working on solutions for the healthcare industry of the future.

Dieter Bauch and Bruno Lamoureux
CEOs - NWT GmbH

A GLOBAL PRESENCE

Our worldwide network of users and distributors enables us to meet all local requirements.

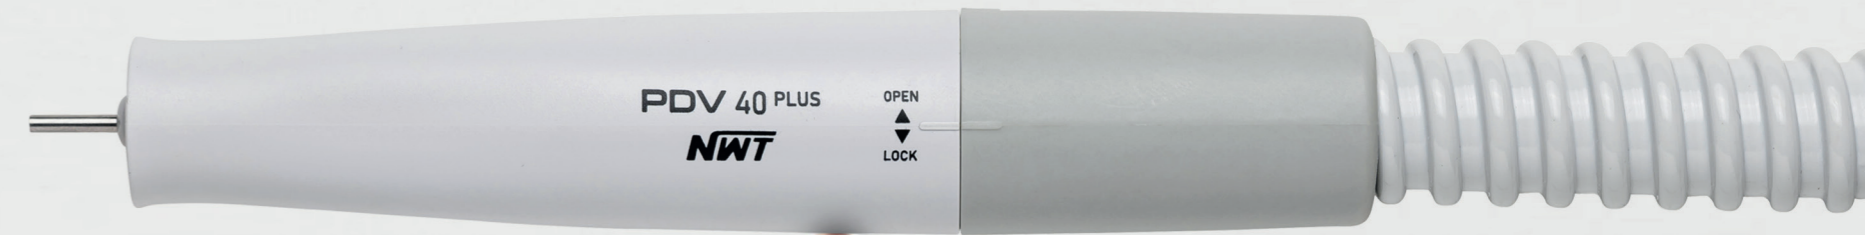

DISTRIBUTORS IN 65 COUNTRIES REPRESENT NWT GMBH.

NWT GmbH has built strong bonds with its long-term distributors, who take on the presentation, installation and customer service on site. Our distributors are trained by us in order to guarantee the best service to our customers. All of our products are developed and manufactured at the company's headquarters in Germany.

USERS' EXPERIENCE AT THE CORE OF OUR INNOVATION AND QUALITY PROCESSES.

We work with a network of world-class professionals and users around the world to innovate, create products and services that meet the needs and challenges faced by our users, their customers and patients.

PODODENT : the perfect balance between power, lightness and performance

SPRAY?

VACUUM?

That's the question

Simple question,

difficult answer

There is no blanket answer to this. Both the spray technique and the suction technique have their advantages for the various treatment steps.

Admittedly, there are great advocates for each technique. However, it is advisable to take a closer look at both techniques and the results obtained during treatment.

SPRAY

The **spray technique** is recommended for work in smaller areas, for example around the nail. Here, excellent illumination of the working area is often of great importance.

- **The spray mist binds the resulting tissue dust and the dust sinks down**
- **A pleasant cooling effect is created for the patient**
- **LED light in daylight quality provides optimal illumination and facilitates work**
- **Vibration-free working**
- **Because of the cooling, it is possible to work at higher speeds**

VACUUM

The **suction technique** is particularly recommended for work that generates a lot of dust, such as grinding off large areas of callus on the sole of the foot or when grinding off nails.

- **Dust is extracted directly**
- **Easy disposal of the dust bags**
- **Free field of vision on the treatment area**
- **Effective work when removing large areas of skin**

For this reason, both techniques should be explained in detail during training and learned in practical work. Each practitioner should form his or her own opinion here.

For many practitioners, therefore, a treatment unit or a combi unit is the best choice. The optimum tool for the various treatment steps is available at all times. These units also offer memory locations for individual settings, foot pedal control, reprocessable handpieces and much more.

SPRAY

**NOW I CAN CHOOSE THE RIGHT MOTOR
HANDPIECE IN MY SELECTED TECHNOLOGY**

VACUUM

SPRAY

Pododent PLUS (L)

Autoclavable handpiece

Thanks to a sophisticated and patented technology, NWT handpieces can be completely detached from the motor by a simple pull. This new technology finally allows the handpiece to be optimally cleaned, disinfected and autoclaved, both inside and out, to provide greater safety for you and your customers.

MAIN CHARACTERISTICS

- Removable handpiece for optimal cleaning, disinfection, sterilisation processes and maintenance.
- Low vibration, smooth rotation of the integrated clamping system.
- Strong and stable torque over the entire speed range.
- Ergonomic design of the handpiece for greater precision.
- The lightweight and compact handpiece reduces hand fatigue and improves balance.
- Hermetically sealed micromotors with low vibration and noise levels.
- An increased clamping force of approximately 30% allows for a greater choice of cutters.
- Unique mechanics for longer life
- Engine speeds from 4,000 to 40,000 rpm with a powerful torque of 3.4 Ncm
- 32,000 LUX LED lighting (optional), natural daylight for a better view (applies to the spray handpiece only).

ROTATION to change the cutter

PULL to remove the handpiece

Pododent EVO (L)

Non-autoclavable handpiece

The brand new Pododent EVO L handpiece has two fiber optic rods that transmit the LED light and illuminate the treatment area with light similar to daylight. It is equipped with a powerful, quiet and brushless micromotor. Its clamping system simplifies daily work.

MAIN CHARACTERISTICS

- Low vibration, smooth rotation of the integrated clamping system.
- Strong and stable torque over the entire speed range.
- Ergonomic design of the handpiece for greater precision.
- The lightweight and compact handpiece reduces hand fatigue and improves balance.
- Hermetically sealed micromotors with low vibration and noise levels.
- An increased clamping force of approximately 30% allows for a greater choice of cutters.
- Unique mechanics for longer life
- Engine speeds from 4,000 to 40,000 rpm with a powerful torque of 3.4 Ncm
- 32,000 LUX LED lighting, natural daylight for a better

ROTATION to change the cutter

PDV 40 PLUS

Autoclavable handpiece

The PDV 40 PLUS is a removable handpiece that can be cleaned, disinfected and autoclaved. It is resistant to chemicals and the high temperature of the autoclave. The new NWT handpieces offer exactly this possibility without any technical restrictions and without any loss of performance.

MAIN CHARACTERISTICS

- Removable handpiece for optimal cleaning, disinfection, sterilisation processes and maintenance.
- Low vibration, smooth rotation of the integrated clamping system.
- Strong and stable torque over the entire speed range.
- Ergonomic design of the handpiece for greater precision.
- The lightweight and compact handpiece reduces hand fatigue and improves balance.
- Hermetically sealed micromotors with low vibration and noise levels.
- An increased clamping force of approximately 30% allows for a greater choice of cutters.
- Unique mechanics for longer life
- Engine speeds from 5,000 to 40,000 rpm with a powerful torque of 3.4 Ncm

ROTATION to change the cutter

PULL to remove the handpiece

PDV 40 EVO

Non-autoclavable handpiece

The PDV 40 EVO vacuum handpiece is equipped with a quiet, brushless, high-performance micromotor. Its high torque allows the user to work quickly, even at low speeds. It is equipped with an easy clamping system. Ergonomic and light to reduce hands fatigue.

MAIN CHARACTERISTICS

- Low vibration, smooth rotation of the integrated clamping system.
- Strong and stable torque over the entire speed range.
- Ergonomic design of the handpiece for greater precision.
- The lightweight and compact handpiece reduces hand fatigue and improves balance.

SPRAY DEVICES

MASTERMOBILE SPRAY

Easy to use. Everywhere.

Lightweight and compact housing.

All the features of a processing unit.

Quick set-up and storage. A weight of only 2.7 kg makes the MasterMobile Spray light and flexible. Its compact size is ideal for daily mobile use.

Modern, high-quality components contribute to its small size and minimal weight, without restricting the level of functionality and requirements.

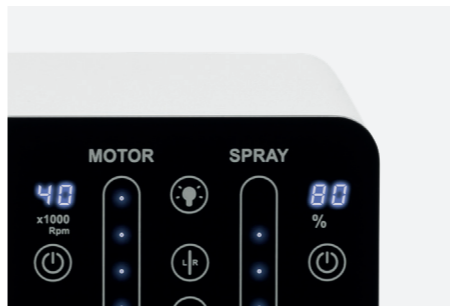

For comfortable home visits and more pleasant care at the client's home.

The **revolutionary design** of the MasterMobile Spray makes it compact, elegant, robust, easy to handle, transportable and clean.

The MasterMobile Spray has a **precision handpiece** based on dental technology, which allows cleaning, disinfection and autoclaving of the handpiece.

The MasterMobile Spray has a **capacitive and intuitive touch screen**. The touch screen can be easily cleaned and disinfected with a disinfectant wipe, ensuring a perfect and hygienic working environment.

Thanks to its ingenious **tunnel system**, the motor cable can be easily stored for transport and pulled out when in use. During treatment, the handpiece can simply be placed in the holder.

The fluid bag is **easily accessible** and replaceable at the back of the unit.

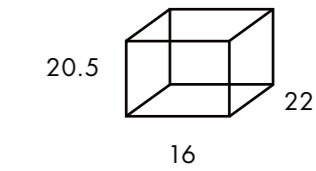

The MasterMobile Spray has an **external plug-in power supply** and a **speed control pedal**, which allows the user to control the speed of the handpiece with their foot.

KEY FEATURES

Quick installation and storage
Thanks to the new design, assembly and disassembly are easy, in less than a minute, light, comfortable and ergonomic.

Cart Modular
Thanks to the new design, the modular system of the Cart Modular can be mounted quickly and easily.

MASTERSPRAY TOUCH

Helps you work. Everywhere.

The MasterSpray Touch is an efficient, compact and portable spraying device for professional users. This highly professional foot care device is equipped with precise, high-quality motors and handpieces based on dental technology.

The intuitive touch screen is very easy to clean, for a perfect and hygienic working environment. All functions of the MasterSpray Touch are electronically controlled, including the spray.

The MasterSpray Touch is equipped with an **autoclavable handpiece** with or without light. All our motors and handpieces are based on dental technology.

The handpiece can be easily placed on the **holder** on the side of the unit at any time without the risk of falling.

The MasterSpray Touch is equipped with a **capacitive touch screen**. This makes it easy and intuitive to use. Thanks to its smooth surface, it is very easy to clean and disinfect with a disinfectant wipe. This contributes to a perfectly hygienic working environment.

Thanks to the transparent door, the water tank is visible from the outside and the fill level can be checked at any time. The **water tank can be easily removed** for filling or cleaning.

We offer a **robust bag** dedicated to the MasterSpray Touch, which makes it easy to carry and store all the accessories of the device.

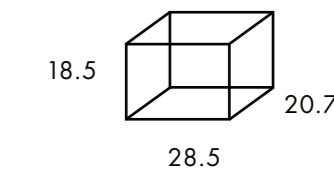

The MasterSpray Touch is equipped with a **speed control pedal**, which allows the user to control the speed of the handpiece with his foot. This way of working means comfort and safety for the user.

Cart Modular
Thanks to the new design, the modular system of the Cart Modular can be mounted quickly and easily.

JETSPRAY

Simple and lightweight.

Our new compact and lightweight device with spray technology. Equipped with the new Pododent Evo or Evo L handpiece from dental technology. With high-quality, hygienic and efficient NWT micromotors. The device has a hygienic and easy-to-clean membrane keyboard and a precisely adjustable spray.

The Jetspray is equipped with a **dental technology based handpiece**, with or without light.

The handpiece can be easily placed in its **holder** on the side of the unit at any time without the risk of falling.

The JetSpray has a **membrane keypad with digital display**. This enables simple and intuitive operation. Thanks to its smooth surface, it is very easy to clean and disinfect with a disinfectant wipe.

Thanks to the transparent door, the water tank is visible from the outside and the fill level can be checked at any time. **The water tank can be easily removed** for filling or cleaning.

For the transport of the JetSpray, there is a **robust bag** that facilitates the transport and storage of all the accessories of the device.

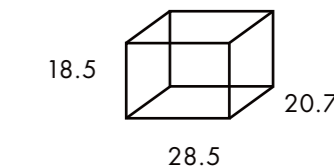

The JetSpray is equipped with a **speed control pedal** that allows the user to control the speed of the handpiece with their foot. This mode of operation provides comfort and safety for the user.

VACUUM DEVICES

MASTERMOBILE VACUUM

Easy to use everywhere.

For comfortable home visits with a high level of care.

The MasterMobile Vacuum combines the functionality of a treatment centre in a compact device with a versatile handpiece. Its light and compact size makes it easy to carry and it can be used anywhere, anytime.

Lightweight and compact housing.

Quick assembly and disassembly.

The revolutionary design of the MasterMobile Vacuum makes it **compact**, elegant, robust, easy to use, transportable and clean.

The MasterMobile Vacuum has a **precision handpiece** based on dental technology to clean, disinfect and autoclave the handpiece.

The MasterMobile Vacuum is equipped with a **capacitive and intuitive touch screen**. The touch screen can be easily cleaned and disinfected with a disinfectant wipe, ensuring a perfect and hygienic working environment.

Thanks to its **ingenious tunnel system**, the suction hose can be easily stored for transport and taken out when in use. During treatment, the handpiece can be easily placed in the holder.

The **dust bag** is easily accessible and interchangeable on the front of the unit.

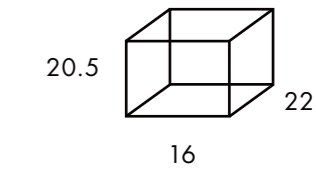

The MasterMobile Vacuum has an **external power supply and a speed control pedal**, which allows the user to control the speed of the handpiece with their foot.

OMNICUT

OMNICUT & G65L + NT 100 MOTOR

Autoclavable handpieces

Omnicut is a special patented tool head for the fast and safe removal of calloused tissue on the sole of the foot and heel. Omnicut is an ideal complement to the NWT handpiece motors (E-Type).

OMNICUT

Autoclavable handpiece

The special Omnicut treatment head is equipped with two rotating blades. This means that even thick, stubborn layers of the cornea can be removed layer by layer within seconds after appropriate pre-treatment. Omnicut is simply attached to the micromotor instead of the handpiece.

The treatment head can be removed for cleaning and blade replacement.

Omnicut and blades can be disinfected and autoclaved.

Removal of calluses from the sole of the foot. Removal of callus from the heel.

G65L

Autoclavable handpiece

MAIN CHARACTERISTICS

- Removable handpiece for optimal cleaning, disinfection, sterilisation processes and maintenance.
- Low vibration, smooth rotation of the integrated clamping system.
- Strong and stable torque over the entire speed range.
- Ergonomic design of the handpiece for greater precision.
- The lightweight and compact handpiece reduces hand fatigue and improves balance.
- Hermetically sealed micromotors with low vibration and noise levels.
- An increased clamping force of approximately 30% allows for a greater choice of cutters.
- Unique mechanics for longer life
- Engine speeds from 4,000 to 40,000 rpm with a powerful torque of 3.4 Ncm
- 32,000 LUX LED lighting, natural daylight for a better view (applies to the spray handpiece only).

ROTATION to change the cutter

PULL to remove the handpiece

ACCESSORIES

LED LAMP

Base line

The magnifying lamp we offer was developed by NWT in Germany. Its powerful magnifying glass combined with a natural LED light offers a perfect view during foot care. The LED light can be switched on and off easily and without force by means of a touch sensor. The LED magnifying lamp is very light and easy to clean thanks to its smooth surfaces.
